## **CPAP (Continuous Positive Airway pressure) Bedside Application in the Newborn PK Rajiv**

Doody Rating : 3 stars : The incidence of low birth weight and prematurity remains high in many countries and neonatal mortality and morbidity continue to be major health resource problems. Respiratory disorders form a major chunk contributing to neonatal mortality. There remains an emergent need to streamline the health delivery into a three-tier system which is hospital-based, and the use of indigenous or low cost systems of respiratory assistance. Neonatal research is evolving day-by-day and a lot of advances have been made in the respiratory support of sick newborns. In the 1970s, Gregory by his principle of application of CPAP created a distinct awareness based on its singular impact in neonatal respiratory care. This initiated the innovative advances in the generation and delivery of CPAP. The concept of gentle ventilation and preservation of spontaneous breathing of infants made by Dr Jen Wung, Columbia University in the 1970s threw new light in the utility of CPAP in neonatal respiratory disorders. The impact of the ever-increasing cost of neonatal intensive care on the distribution of health resources must not be underestimated. In the current economic status of a country, it is important for professionals who deal with newborn infants to review their practices and identify ways and methods of providing effective care in a cost-effective manner. CPAP is the simplest, effective and economic way of respiratory support, which when practiced universally in a structured fashion, would save thousands of lives. It is a device of respiratory assistance suitable in all the countries where everyone cannot afford costly ventilation and surfactant. In this given scenario, every health care personnel dealing with newborn care should have a sound working knowledge of CPAP. These logistic implications made me to write this book. It is structured in such a way, to present the practical aspects of CPAP in a simple and user-friendly way. This book is intended to be used as a handbook by pediatricians and health care personnel who care for the neonates in a nontertiary institution. This book will serve the purpose of giving critical guidelines in the bedside management of CPAP to health care professionals dealing with neonatal respiratory care.

When you read this CPAP (Continuous Positive Airway pressure) Bedside Application in the Newborn, you can tells your family, friends and also soon about yours e-book. Your knowledge can inspire different ones, make them reading a reserve.

#### **Leslie White:**

The actual book CPAP (Continuous Positive Airway pressure) Bedside Application in the Newborn has a lot of knowledge on it. So when you make sure to read this book you can get a lot of help. The book was written by the very famous author. Mcdougal makes some research prior to write this book. This specific book very easy to read you will get the point easily after perusing this book.

#### **Marilyn Perez:**

As a scholar exactly feel bored in order to reading. If their teacher asked them to go to the library in order to make summary for some book, they are complained. Just small students that has reading's internal or real their interest. They just do what the trainer want, like asked to the library. They go to there but nothing reading significantly. Any students feel that studying is not important, boring along with can't see colorful images on there. Yeah, it is to get complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. So , this CPAP (Continuous Positive Airway pressure) Bedside Application in the

Newborn can make you feel more interested to read.
