Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses) Jeffrey Michael McMahon

Interest in structures with nanometer-length features has significantly increased as experimental techniques for their fabrication have become possible. The study of phenomena in this area is termed nanoscience, and is a research focus of chemists, pure and applied physics, electrical engineers, and others. The reason for such a focus is the wide range of novel effects that exist at this scale, both of fundamental and practical interest, which often arise from the interaction between metallic nanostructures and light, and range from large electromagnetic field enhancements to extraordinary optical transmission of light through arrays of subwavelength holes.

This dissertation is aimed at addressing some of the most fundamental and outstanding questions in nanoscience from a theoretical and computational perspective, specifically:

· At the single nanoparticle level, how well do experimental and classical electrodynamics agree?

 \cdot What is the detailed relationship between optical response and nanoparticle morphology, composition, and environment?

 \cdot Does an optimal nanostructure exist for generating large electromagnetic field enhancements, and is there a fundamental limit to this?

 \cdot Can nanostructures be used to control light, such as confining it, or causing fundamentally different scattering phenomena to interact, such as electromagnetic surface modes and diffraction effects?

 \cdot Is it possible to calculate quantum effects using classical electrodynamics, and if so, how do they affect optical properties?

From reader reviews:

Thomas Bedwell:

Book is to be different for each and every grade. Book for children until finally adult are different content. As you may know that book is very important for us. The book Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses) was making you to know about other expertise and of course you can take more information. It is extremely advantages for you. The book Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses) is not only giving you considerably more new information but also for being your friend when you truly feel bored. You can spend your current spend time to read your ebook. Try to make relationship together with the book Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses) is not only giving you considerably more new information but also for being your friend when you truly feel bored. You can spend your current spend time to read your ebook. Try to make relationship together with the book Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses). You never feel lose out for everything in the event you read some books.

Pandora Rice:

Precisely why? Because this Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses) is an unordinary book that the inside of the publication waiting for you to snap that but latter it will zap you with the secret the item inside. Reading this book close to it was fantastic author who else write the book in such amazing way makes the content inside easier to understand, entertaining approach but still convey the meaning totally. So , it is good for you because of not hesitating having this any more or you going to regret it. This unique book will give you a lot of advantages than the other book get such as help improving your expertise and your critical thinking technique. So , still want to hold off having that book? If I were being you I will go to the e-book store hurriedly.

Cathie Moss:

Reading a book to be new life style in this yr; every people loves to examine a book. When you learn a book you can get a large amount of benefit. When you read ebooks, you can improve your knowledge, simply because book has a lot of information on it. The information that you will get depend on what forms of book that you have read. If you want to get information about your review, you can read education books, but if you act like you want to entertain yourself read a fiction books, these kinds of us novel, comics, in addition to soon. The Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses) provide you with new experience in reading through a book.

Ronald Cleary:

A lot of book has printed but it takes a different approach. You can get it by online on social media. You can choose the very best book for you, science, witty, novel, or whatever by means of searching from it. It is identified as of book Topics in Theoretical and Computational Nanoscience: From Controlling Light at the Nanoscale to Calculating Quantum Effects with Classical Electrodynamics (Springer Theses). You can add your knowledge by it. Without leaving behind the printed book, it can add your knowledge and make a person happier to read. It is most significant that, you must aware about reserve. It can bring you from one spot to other place.
