Growth, Nutrition, and Metabolism of Cells In Culture V1: v. 1

Growth, Nutrition, and Metabolism of Cells In Culture V1: v. 1

Growth, Nutrition, and Metabolism of Cells in Culture, Volume 1, summarizes the state of knowledge of the growth, nutrition, and metabolism of various types of cell cultures. The chapters are both detailed and comprehensive enough for the specialist and broad enough to provide a general background for the nonspecialist. The present volume discusses the uptake, synthesis, and degradation of biologically important compounds, particularly the major components usually present in tissue culture medium.

The book begins by tracing the history of the development of tissue culture. This is followed by separate chapters on early development of cell culture nutrition; the biological effects of serum; the energy metabolism of malignant cells; the gaseous environment of the mammalian cell in culture; and the uptake and utilization of amino acids by cells in culture. Subsequent chapters cover purine and pyrimidine metabolism; lipids in cell culture; the use of cell cultures for sterol metabolism studies; the genetic expressions of human diploid fibroblast cell cultures; and structural features of mammalian complex carbohydrates.
